

Minolta Program 5400 HS

Minolta programm in 5400 HS

Non-new

Preflash exposure measurement

Moreover a Dynax 700si, 800si, 9 or 7 is required. In contrast to the "real" TTL flash a measuring flash is lighted here shortly before the real flash and the "normal" exposure measurement of the camera is used. The values ascertained with it are used to steer the distribution of 4 segments of the TTL measurement. With it "a little "more sensitive" exposure measurements are possible in difficult situations.

Flash exposure ADI

The flash control ADI with the Dynax 7 or 5 does not function with this flash. The newer 5600HS is necessary for this. However, the whole is worthwhile only if one also owns objectives with Entfernungscoder (new "D" row). Unfortunately the Dimage-digital cameras also need the ADI control for which also always), so that this flash does not function with the Dimage 5/7/7i.

Distant release

The flash can be used to light cordless other flashes or can be also steered itself cordless. In addition one needs of course again camera and flash which support this. Well functions with the Dynax 7, because here the camera flash can take over a part of the exposure. Thus one can very simply produce a combination of direct and indirect light.
