## **Heidelberg LinoColor version 6 with JobAssistant**

New software version of the Scan and picture processing software of Heidelberg

LinoColor 6.0 with advantages for Color management and Copix

Now LinoColor, the software for professional scanning, picture processing and integrated colour management of Heidelberg, is available in a new version - as a LinoColor 6.0. The update serves a row of improvements which become apparent above all with the Color management and in the function Copix. Beside the classical use as a scanner-operating programme for drum and level bed scanner of Heidelberg LinoColor 6.0 also distinguishes itself as a Standalone product for the picture treatment. Productively and with high quality picture data optimised can be scaled, corrected, be separated sharpened, and be stored. With his Color Matching method (CMM), to the profile ICC editor and his Softproof possibilities LinoColor 6.0 is the leading Color management programme.

The Color management in LinoColor 6.0 was developed and formed even more comfortably. Now it is possible "to read Embedded ICC of profiles" - picture data (ICC = Internationally Color Consortium) and to generate as they are more and more often to be found in modern workflows. In the files in addition to the picture data to embedded ICC profiles had to be assigned up to now by hand what could lead to mistakes. Now the scanned fine data with the accordingly suspended ICC profile can be spent in a file. The workflow is thereby clearly improved for applications like photo shop 5.0, curd Xpress 4.0 and Helios GRANDPA 2.0.

Now with the integrated ICC profile editor ICC issue, ICC monitor - and ICC input profiles with LCH corrections can be changed individually. For the issue the ICC issue profiles can be also reworked with the help of the CMYK corrections in colour. This is especially helpful for printers which want to adapt her issue profiles exactly to her pressure machines. However, just can be adapted also to monitor to customised standards.

From the first sight the user selects Window his ICC profiles in the "profile of set-up". This makes easier the service. Now, in addition, LinoColor 6.0 also serves selectable grey and RGB profiles for the simulation of the view specific for pressure. The Softproof can be controlled in all modes (RGB, grey, CMYK) visually. An other improvement realised in LinoColor 6.0 is based to "PrintTableEditor ICC", - instead of up to now on LinoColor pressure tables - now on ICC profiles.

Now for the level bed scanner TOPAZ Copix which is used for the Redigitalisieren already of printed in halftone presentations is available of the Register-Assistant. Just as by the drum scanner TANGO Copix supports of the RegisterAssistant the already available CopixAssistant. During the CopixAssistant for the inquiry of the grid width, the grid corner and the base film density provides, is the job of the RegisterAssistant to analyse the passport crosses on the lithographs, to fit the colour extracts automatically and to prevent Passer while mounting defect. Condition for it is the exact scanning from two to four passport crossing.

Condition for the application of LinoColor 6.0 is the operating system Mac OS 8.5 which offers an improved and simplistic file access and permits it to the user to develop his operating surface individually. This version is an excellent support while scanning, by the picture treatment and the whole colour management.

Please only contact us via our registration form and only if you are a business person yourself. Every offer is subject to prior sale and includes your acceptance to our terms & conditions [Terms and conditions \(AGB\)](#). All logos and trademarks on this site are the property of their respective owners.

You will always receive an invoice including tax, which can be paid via wire transfer, in advance or cash. If you register on paypal, you may also pay by charging your paypal account with your credit card. If you are an EU member and you have a validated tax number which can be validated here: [VIES VAT number validation / MwSt.-Informationsaustauschsystem MIAS\) Validierung der MWSt.-Nummer](#) then you pay tax-free. If you are from outside the EU, you can only pay tax-free, if the export is done with the transport company, called 'Schenker'. If you are not using 'Schenker', we cannot guarantee that we will get the export confirmation in time. In that case, you have to pay tax and you get it.
