Crackerjack

Crackerjack is a professional Adobe Acrobat plug-in for the printing issue of PDF documents on any PostScript-issue devices or as a PostScript file. With it is suited Crackerjack for the control of printers, photocopiers, Proofers, film and platesetters and digital pressure machines to head for this optimally and to generate professional colour pressure or colour dissolutions. The topical version is compatible with Adobe Acrobat 6 and 7 (standard and professional) as well as Acrobat 5.0.

Preseparated issue on any issue devices

Crackerjack supports beside a quick In-RIP dissolution on modern PostScript level 2-and issue devices PostScript 3 also the preseparated issue on PostScript-issue devices (level 2 or PostScript 3) or as a PostScript file. Thereby you can check the result of the colour dissolution also on normal desktop printers or with the help of the Distillers also on the screen.

Side preview on issue format

In a preview on the screen Crackerjack shows the contents of the sides of a PDF document in relation to the elective issue format and possible pawning. Also rotation and pressure brands are considered in this Preview.

In addition, the dissolution preview permits an investigation of the dissolution result before the real PostScript issue. About buttons single colour extracts can be faded in or faded out to be able to control the Überdrucken or leaving blank of elements, so e.g.

Picture data RGB can be converted separately via ICC profiles. Therefore text objects and vector objects can be separated like up to now furthermore with an UCR/GCR based beginning (f.e. with at most black what leads to the fact that RGB black is converted into 100% of black of CMYK) and picture data either with the same settings or alternatively are converted by the colour management of the operating system by means of well-chosen source profile and aim profile.

Crackerjack pilot for batch processing

Now Crackerjack contain the Crackerjack formerly available as a separate product pilot and offer the batch processing of PDF documents. Besides, Crackerjack supervises determinable Hotfolder and spends the files with the in each case deposited pressure settings near defined issue devices. Excellent tools for the automation of printing processes on your network! Importantly: Also the issue device can be deposited in these settings firmly, so that you can furnish different Hotfolder which spend the PDFs stored in it on different issue devices.

Automatic adaptation of the issue format in side size

Crackerjack can adapt the issue format (paper format) automatically to the respective side size of a PDF document. Besides, they can immediately add a standard edge around every side (possibly for pressure brands, info lines etc.)

Pressure brand options

They can choose the issue of additional pressure brands. Now passport crosses, Beschnittzeichen, file and extract names as well as colour beams are available. The distance of the Beschnittzeichen is freely eligible aside. Also a firmly defined background can be given in each case with the pressure data together.

Storable pressure settings

So that consistent pressure results are attainable, the once found pressure settings can be stored away for different issue devices or printing methods as a set and call away over and over again. On these sets one also has with the arrangement of the Hotfolder for the automated pressure by Hotfolder access.

Differences Acrobat 6/7 professionals - Crackerjack 5

Crackerjack is for users of Acrobat 5 (and earlier) an absolute must to spend PDFs from Acrobat separated. However, with Acrobat 6 and 7 - indeed, also here only in the Acrobat professional's variation - Adobe offers a lot of innovations in the issue area. Thus dissolution belongs to it beside the dissolution-Preview also the preseparated (On-Host) or in-RIP. Nevertheless, there is one more row of functions which can offer in this form only Crackerjack:

- Hotfolderbasierte issue of PDFs near different issue devices or with differently predefined pressure options. Acrobat 6/7 professionals offers here "only" the issue by batch company - no right, automated Hotfoldermodus.
- Separate conversion RGB-CMYK for text / vector and pictures. With it, e.g., texts are achievable in RGB black in 100% of black of CMYK convert and at the same time for RGB pictures by means of ICC profiles an optimum colour conversion.
- Store away from printing settings as a set for a consistent re-use.
- Automatic format recognition and place from pressure brands (in particular for the hotfolderbasierende pressure issue importantly!)
- Optional written download for non-embedded fonts during the pressure issue.
- Optional balance (compensation) for sound appreciation of value.
- Change from certain RGB-or CMYK colours to jewellery colours for e.g. 2C issue of a 4C to invested jobs.
