

# Mac OS X 10.6.3 Snow Leopard

Mac OS X Snow 10.6.3 leopard

### **Optimises. From the installation to switching off.**

Thanks to many small and big changes Mac OS X Snow leopard makes your Mac quicker, more reliable and more user-friendly.

### **Not anew fictitious. But even better.**

Mac OS X is known for his simplicity, reliability and user friendliness. Therefore, by the development of Snow leopard the Apple engineers had only one aim in the eye: to make a great system even better. They searched areas to improve it something in which, gave to simplify or to accelerated - little things like ejecting external disk drives, but also basic things like the installation of the operating system. Besides, in many cases they managed the step of the great to the fantastic. Here a few examples which should show how the improvements in the Mac perceptibly affect:

### **The brand-new, good old finder.**

The finder was entirely anew written for the use of the technologies in Snow leopard - including 64-bit support and Grand Central Dispatch-. The answer behaviour of the finder was improved basically. And he has new achievement signs, e.g., adaptable searching options in Spotlight and an improved symbolic representation for paging through of multilateral documents or to the respect of QuickTime to films.

### **New look, new functions. For plan and pile.**

Plan was optimised and is more user-friendly yet. Now it is integrated into the dock, you can click simply a program symbol in the dock and hold, and the windows of the concerning programme already rise and you can change fast between the windows. Moreover, plan presents itself in quite a new look. Now the windows are arranged in a clear pattern in which one finds everything still much lighter. And now piles - dock objects for the quick access to a folder with several files - can be paged through, so that you can lighter indicate all objects. You can also navigate by the folders in a pile and see so all files contained in it.

### **Quicker time Machine backup.**

Mac OS X leopards brought with the revolutionary time Machine for the first time the possibility for a really easy data protection of your hard disk contents. Time Capsule made the securing even more comfortably by the without cable linked hard disk which functions seamlessly with time Machine. And in Snow leopard time Machine becomes even more efficient and reduces the duration of a first protection to time Capsule around up to 50%.

### **Quicker waking, switching off and bandaging with wireless networks.**

With Snow leopard wakes of the Mac twice as fast from the rest state if the screen barrier is activated. Switching off goes around up to 75% faster - you win valuable time for the way home or to the airport. And now the bandaging with wireless networks is quicker around up to 55%.

### **Even quicker, more reliable installation.**

It was never lighter to update your Mac. With Snow leopard the whole process is strongly simplified, optimised and is quicker around up to 45%. And, besides, still more extensively and more reliably. Snow leopard checks, e.g., your programmes to make sure that they are compatible, and puts aside incompatible programmes. After a stream failure during the installation this can be restarted without overrun.

### **Less is more.**

Snow leopard does book sometimes more half of the storage space of the predecessor's version. And you have at disposal with it about 6 GB more place - for 1,500 songs or a few thousand photos. (Based on 4-minute songs and 128 Kbit / Sek. AAC coding. The actual capacity can vary according to coding method and bit rate.)

### **A big step for QuickTime.**

QuickTime X is the media technology of the next generation for the perfect audiopleasure and videopleasure in Mac OS X Snow leopard. It encloses an absolutely new QuickTime player with a clear surface, a new surface for trimming and an easy Upload in YouTube and MobileMe. And he offers a more efficient media reproduction, HTTP-based Live-Streaming and bigger colour precision.

**Innovative input for Chinese characters.**

If you wanted to give Chinese signs in a computer before Snow leopard, you had to give the phonetic manner of writing of Chinese words, and the computer moved this then in the suitable characters. Now Snow leopard offers an absolutely new input possibility: You "draw" the signs directly on the Multi-Touch-Trackpad of your Mac notebooks. Then they appear on the screen in a new input window with proposals on the basis of your input. Then you select the right sign from the proposals. The input window makes with the help of your choice even proposals for the next signs.

**Even more reliable iChat, with higher resolution.**

Videochats in iChat are more reliable with Snow leopard yet and are better accessible (for videochats an Internet-broadband connection is necessary). Now the operating system technology repairs problems with the compatibility of Routers which could disturb the connection or interrupt. And if iChat no direct connection can produce, it furnishes about the Relay server AIM a successful chat meeting.

Now more users Videochats can enjoy in high resolution (640 x 480 pixels), because the technical conditions are not so high any more: Only one third of the Upstream range is required - 300 Kbit / Sek. instead of as before 900 Kbit / Sek. And now in addition iChat theatre offers a resolution of 640 x 480 - the fourfold towards earlier.
